FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box I.2

Claims Nos.: not applicable

Present claims 61-63 and 67-75 relate to methods defined by reference to a desirable characteristic or property, namely the products obtained by the methods lack a plane of symmetry.

The claims cover all methods having this characteristic or property, whereas the application provides support within the meaning of Article 6 PCT and/or disclosure within the meaning of Article 5 PCT for only a very limited number of such methods. In the present case, the claims so lack support, and the application so lacks disclosure, that a meaningful search over the whole of the claimed scope is impossible. Independent of the above reasoning, the claims also lack clarity (Article 6 PCT). An attempt is made to define the methods by reference to a result to be achieved. Again, this lack of clarity in the present case is such as to render a meaningful search over the whole of the claimed scope impossible. Consequently, the search has been carried out for those parts of the claims which appear to be clear, supported and disclosed, namely those parts relating to the methods involving enantioselective olefin metathesis reactions.

In view of the extremely broad claims, the search was executed with due regard to the PCT search Guidelines (PCT/GL/2, C-III, paragraph 2.1, 2.3 read in conjunction with 3.7) and Rule 33.3 PCT, i.e. the international search was executed with particular emphasis on the inventive concept, represented by the following subject-matter: enantioselective olefin metathesis reactions, and, insofar as possible and reasonable was complete in that the entire subject-matter to which the claims are directed has been taken into account.
